## **Notice of Requirement for Carriers to Comply with California Air Resources Board's Transport Refrigeration Unit Airborne Toxic Control Measure**

United World Cargo Limited requires all refrigerated carriers to comply with the regulations of the California Air Resources Board's (ARB) Transportation Refrigeration Unit (TRU or reefer) Airborne Toxic Control Measure (ATCM or Regulation). More information is available at <http://www.arb.ca.gov/diesel/tru/tru.htm>.

As a carrier hired to supply refrigerated transport services to United World Cargo, you must certify to us that you will only dispatch reefers which comply with the ARB's TRU ATCM in-use performance standards for transporting perishable goods on California highways or railways.

All California-domiciled carriers are required to be registered in the ARB's Equipment Registration (ARBER) system. If you are a carrier based outside of California and have not registered your reefers in ARBER, we strongly recommend that you register the reefers you plan to dispatch to California. If you are a refrigerated carrier that wants to be hired by United World Cargo, you must have an ARBER Certification Page for each reefer that you plan to dispatch for transporting perishable goods to show compliance with the in-use standards. Before we hire you, you must send a copy of your ARBER Certification Pages to United World Cargo for the reefers you plan to dispatch to California.

**Please note the receipt of this form designates your organization's understanding and acceptance of these requirements and your compliance to the program.**

Sincerely,

**United World Cargo**
